

UAT Test Cases — Tralee Masjid (traleemasjidkicc.ie)

Site: <https://traleemasjidkicc.ie>

Repository: <https://github.com/traleemasjidkicc/traleemasjidkicc.github.io>

Audit Date: 28 June 2026

Prepared by: QA Audit (Senior QA Engineer)

Tech Stack: Static HTML, Bootstrap 4.3.1, jQuery, Gulp, Formspree (contact form), Google Analytics, Mixlr (live audio), SumUp (donations), Google Maps embed

Pages audited: index.html, contact.html, prayer-times.html, activities.html, madrasa.html, projects.html, about.html

Overview

The Tralee Masjid website is a static multi-page site for the Kerry Islamic Cultural Centre (KICC). Key user flows include:

- Viewing daily/monthly prayer (Salah) times
- Navigating between pages via a Bootstrap 4 mega-menu navbar
- Contacting staff via a Formspree-powered contact form, call buttons, and WhatsApp links
- Reading about programmes, madrasa, new masjid project, and the organisation
- Accepting/declining cookie consent before the site unlocks
- Viewing an embedded Google Map with consent gate
- Donating via GoFundMe external link

Navigation

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
N-01	Sticky navbar visible on scroll	Mobile – Portrait	1. Open homepage. 2. Accept cookies. 3. Scroll down 500px. 4. Observe navbar position.	Navbar remains fixed at top of viewport with <code>sticky-top</code> class active, logo and hamburger visible.	
N-02	Hamburger menu opens and closes	Mobile – Portrait	1. Tap the hamburger icon (☰). 2. Verify menu expands. 3. Tap the × icon to close.	Full nav menu drops down smoothly. Close icon replaces hamburger. Tapping × collapses menu.	
N-03	Hamburger menu in landscape	Mobile – Landscape	1. Rotate device. 2. Observe if navbar switches to expanded desktop mode or retains hamburger.	At typical landscape widths (≥576px), Bootstrap may expand nav. Menu must not overflow or clip.	
N-04	Mega-menu opens on tap – Programmes	Mobile – Portrait	1. Tap "Programmes" link in expanded hamburger menu. 2. Observe dropdown.	Mega-menu expands inline showing three columns: Browse, Classes, Listen & Updates. All links tappable.	

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
N-05	Mega-menu opens on hover – Programmes	Laptop / Desktop	1. Hover over "Programmes" in navbar.	Mega-menu drops down showing 3-column layout with Browse, Classes, Listen & Updates sections.	
N-06	Mega-menu keyboard navigation	Laptop / Desktop	1. Tab to "Programmes" nav link. 2. Press Enter/Space. 3. Arrow through sub-links. 4. Press Escape.	Dropdown opens on Enter, arrow keys move focus through links, Escape closes dropdown and returns focus to trigger.	
N-07	Salah Times dropdown in navbar	Mobile – Portrait	1. Open hamburger menu. 2. Tap "Salah times".	Mini prayer times table shows Fajr, Zohr, Asar, Magrib, Isha with Adhan and Iqamah columns. Data must not show "—" (indicates API/data loaded). PDF button visible.	
N-08	Salah Times dropdown in navbar	Laptop / Desktop	1. Click "Salah times" in navbar.	Dropdown appears right-aligned showing prayer times table, Hijri date, sunrise time, full timetable link, and current month PDF download button.	
N-09	"Donate now" button in navbar	All Devices	1. Tap/click "Donate now" button in top nav.	Opens GoFundMe donation page in a new tab. No broken link or 404.	
N-10	Active page indicated in navbar	Laptop / Desktop	1. Navigate to contact.html. 2. Observe the "About" nav item (parent of Contact).	"About" nav item shows active state (.active class or highlighted). Current page is visually indicated.	
N-11	Skip to main content link	Laptop / Desktop	1. Open any page. 2. Press Tab as first keyboard action. 3. Press Enter.	"Skip to main content" link appears and focus jumps directly to #main-content, bypassing the navbar.	
N-12	All navbar links resolve correctly	Laptop / Desktop	1. Click every link in the navbar including mega-menu sub-links. 2. Verify each page loads without 404.	All internal links load correct pages. External links (Mixlr, Kerry Muslim DB, Dhikr app) open in new tab.	

Cookie Consent

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
CC-01	Cookie banner blocks site on first visit	Mobile – Portrait	1. Clear all cookies for the domain. 2. Load the site.	Cookie consent dialog appears immediately and site content behind it is <code>inert</code> (not interactive).	
CC-02	"Accept all" enables site and analytics	Mobile – Portrait	1. On cookie banner, tap "Accept all".	Banner dismisses, site becomes fully interactive, <code>kicc-cookie-consent</code> cookie set, Google Analytics fires.	
CC-03	"Necessary only" blocks analytics	Laptop / Desktop	1. Open cookie banner. 2. Click "Necessary only".	Banner dismisses, site is interactive, analytics cookie NOT set, Google Maps and Mixlr embeds remain behind consent gate.	

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
CC-04	Cookie settings panel opens	Mobile – Portrait	1. On cookie banner, tap "Cookie settings".	Cookie preferences dialog slides in with toggles for Functional, Analytics, and Third-party embeds. Strictly Necessary always shows "Always on".	
CC-05	Toggle states persist on reload	Laptop / Desktop	1. Accept analytics but leave Third-party embeds off. 2. Reload page. 3. Open Cookie settings.	Toggles reflect previously saved choices. Analytics is on, Third-party is off.	
CC-06	"Clear optional stored data" works	Laptop / Desktop	1. Accept all cookies. 2. Open Cookie settings. 3. Click "Clear optional stored data". 4. Reload.	GA cookies (<code>_ga</code> , <code>_gid</code>) are deleted. Maps and Mixlr embeds go back behind consent gate on reload.	
CC-07	Cookie banner not shown on return visit	Mobile – Portrait	1. Accept all cookies. 2. Close browser. 3. Re-open site.	Cookie banner does not appear. Site loads directly.	
CC-08	"Privacy & cookies" footer link opens prefs	Mobile – Portrait	1. Scroll to footer. 2. Tap "Privacy & cookies".	Cookie preferences dialog opens over the page.	

Homepage (index.html)

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
H-01	Hero section renders correctly	Mobile – Portrait	1. Open homepage after accepting cookies. 2. Observe above-the-fold section.	Hero image/banner visible, headline text readable, no text overflow, CTA buttons accessible without zooming.	
H-02	Hero section renders correctly	Laptop / Desktop	1. Load homepage at 1280x800. 2. Observe hero.	Full-width hero, headline and subtitle properly sized, CTA buttons side by side or in correct layout.	
H-03	Prayer times widget on homepage	Mobile – Portrait	1. Load homepage. 2. Locate the daily prayer times section.	Today's prayer times (Fajr–Isha) display with correct Adhan and Iqamah times. Hijri date shown. No "—" placeholders remain.	
H-04	Next prayer highlighted	Laptop / Desktop	1. Load homepage at a time between two prayers.	The upcoming prayer row is visually highlighted or labelled "Next".	
H-05	Announcement/notice banner visible	All Devices	1. Load homepage. 2. Check for any notice or announcement section.	If an active notice exists, it displays prominently. If no notice, section gracefully absent (no empty space).	
H-06	Footer copyright year auto-updates	Laptop / Desktop	1. Scroll to footer. 2. Check copyright year.	@ 2026 Kerry Islamic Cultural Centre – year reflects current year via JS <code>#footer-year</code> element.	
H-07	Homepage layout on very small screen	Mobile – Portrait	1. Open on 320px width (iPhone SE).	No horizontal scroll. All content fits within viewport. Text readable without zooming.	

Prayer Times Page (prayer-times.html)

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
PT-01	Full monthly timetable renders	Mobile – Portrait	1. Navigate to prayer-times.html.	A table or structured list shows all days of the current month with daily prayer times. Current day is highlighted.	
PT-02	Full monthly timetable renders	Laptop / Desktop	1. Navigate to prayer-times.html.	Table laid out in full with visible column headers (Fajr, Zohr, Asar, Magrib, Isha, Sunrise). No horizontal scroll needed.	
PT-03	Monthly PDF download	All Devices	1. Find the monthly PDF button. 2. Click/tap it.	PDF opens/downloads. Filename reflects current month. No 404 or broken link.	
PT-04	Jumu'ah Salah section	All Devices	1. Scroll to or navigate to #prayer-times-jumuah.	Jumu'ah time and any notes (e.g., Khutbah start) displayed clearly.	
PT-05	Timetable readable in landscape	Mobile – Landscape	1. Rotate to landscape on mobile. 2. View the prayer times table.	Table fits width, no columns cut off, horizontal scroll within table acceptable but page-level scroll should not occur.	
PT-06	Hijri date display	All Devices	1. Load prayer-times.html.	Hijri date is shown and matches today's Islamic calendar date. Not empty.	

Contact Page (contact.html)

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
CF-01	Contact form visible and functional	Mobile – Portrait	1. Open contact.html. 2. Scroll to "Send a message". 3. Verify all three fields (Name, Email, Message) are present.	Name, Email, and Message fields visible with labels, hint text, and required markers. Submit button visible and tappable.	
CF-02	Form validation – empty submit	Mobile – Portrait	1. Leave all fields blank. 2. Tap "Send message".	Inline error messages appear under each field. Form does not submit. Focus moves to first error.	
CF-03	Form validation – invalid email	Laptop / Desktop	1. Enter "test" in email field. 2. Click submit.	Error message appears: "Enter a valid email address, for example name@example.com ".	
CF-04	Form validation – name too short	Laptop / Desktop	1. Enter "AB" in name field. 2. Submit.	Error shown: "At least 3 characters."	
CF-05	Message character counter works	Mobile – Portrait	1. Type in the message textarea.	Character counter below textarea updates in real time showing "X / 2000".	
CF-06	Form validation – message too short	Laptop / Desktop	1. Enter fewer than 20 characters in message. 2. Submit.	Validation error shown on message field.	
CF-07	Successful form submission	Laptop / Desktop	1. Fill in valid Name, Email, and Message (≥20 chars). 2. Submit.	Form submits to Formspree. Success confirmation shown to user. Form does not re-submit on page refresh.	

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
CF-08	Call buttons function on mobile	Mobile – Portrait	1. Tap "Call" button for Imam Mustafa Patel.	Device's phone dialler opens with pre-filled number +353 86 244 0556.	
CF-09	WhatsApp links function on mobile	Mobile – Portrait	1. Tap any "WhatsApp" button.	WhatsApp opens (or app store if not installed) with pre-filled greeting message in correct language.	
CF-10	"Directions from my location" button	Mobile – Portrait	1. Tap "Directions from my location".	Browser requests geolocation permission. On grant, opens Google Maps or native maps with route to KICC. On denial, graceful fallback.	
CF-11	"Open in Google Maps" button	All Devices	1. Click/tap "Open in Google Maps".	Google Maps opens in new tab showing Kerry Islamic Cultural Centre pin correctly placed.	
CF-12	Embedded map behind consent gate	Laptop / Desktop	1. Visit contact.html with Third-party embeds consent declined. 2. Observe map area.	Map placeholder shown with message "Enable Third-party embeds in Privacy & cookies to load Google Maps." Link in message opens cookie prefs dialog.	
CF-13	Embedded map loads with consent	Laptop / Desktop	1. Accept Third-party embeds in cookie settings. 2. Reload contact.html.	Google Maps iframe renders correctly showing the KICC location.	
CF-14	Contact section-nav anchors work	All Devices	1. Click each item in the section navigation bar (Welcome, Reach the right person, Visit us, Send a message).	Page scrolls smoothly to the corresponding section. Active link updates.	
CF-15	Section nav docks on scroll	Laptop / Desktop	1. Scroll down past the hero. 2. Observe the section nav.	Section nav becomes sticky/docked at top of content area. Updates active item as user scrolls.	
CF-16	Arabic greeting text renders correctly	All Devices	1. Observe the Arabic text "اَلْسَّلَامُ عَلَيْكُمْ" in the contact hero.	Arabic text renders right-to-left, correct font, no missing glyphs, no character squares.	

Activities / Programmes Page (activities.html)

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
A-01	"This week" section displays	All Devices	1. Navigate to activities.html#this-week.	Current week's programme schedule displayed. No empty section. Dates correct.	
A-02	Programme guide section renders	Mobile – Portrait	1. Scroll to #programme-guide.	Grid/list of regular programmes visible, no content overflow, readable on mobile.	
A-03	Women's weekly class section	All Devices	1. Navigate to #womens-weekly-class.	Content for women's weekly class shown with schedule, location, and contact details.	

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
A-04	Live audio / Mixlr embed	Laptop / Desktop	1. Accept Third-party embeds. 2. Navigate to #live-audio-recordings.	Mixlr embed player renders and is playable. If no live stream, shows previous recordings link.	
A-05	Mixlr behind consent gate	All Devices	1. Decline Third-party embeds. 2. Navigate to #live-audio-recordings.	Consent gate placeholder shown for Mixlr embed.	
A-06	External links open in new tab	Laptop / Desktop	1. Click "Previous talks" (Mixlr), "Kerry Muslim database" (MS Forms), "Dhikr & Du'a app" links.	All external links open in new tab (target="_blank"). No unexpected navigation away from site.	

Madrasa Page (madrasa.html)

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
M-01	Class times section renders	All Devices	1. Navigate to madrasa.html#class-times.	Class timetable or schedule visible with days, times, and any location info.	
M-02	Madrasa page layout on mobile	Mobile – Portrait	1. Load madrasa.html on a 375px screen.	All content readable. No text cut off. Images (if any) scale correctly.	
M-03	Enrolment/contact CTA present	All Devices	1. Read through the page.	A clear call-to-action for parents/guardians to enrol children or contact the madrasa is visible.	

Projects / New Masjid Page (projects.html)

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
P-01	Donation CTA renders and links	All Devices	1. Navigate to projects.html. 2. Find the donation button. 3. Click/tap it.	Donation button links to GoFundMe in a new tab. Amount progress bar (if present) renders correctly.	
P-02	Project update content readable	Mobile – Portrait	1. Load projects.html.	All update text, headings, and any images render clearly at mobile width. No overflow.	
P-03	SumUp payment embed (if present)	Laptop / Desktop	1. Accept Third-party embeds. 2. Check for SumUp card payment widget.	SumUp widget renders with card payment option. If behind consent gate, placeholder shown when embeds declined.	
P-04	Image gallery / media loads	All Devices	1. Scroll through projects page.	All images load (no broken image icons). Images scale to container width. Alt text present.	

About Page (about.html)

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
AB-01	Our team section renders	All Devices	1. Navigate to about.html#our-team.	Team member cards/list visible with names, roles, and any contact or bio information.	
AB-02	Our story / history renders	Laptop / Desktop	1. Navigate to about.html#our-story.	Long-form text content readable, correct heading hierarchy, paragraphs well spaced.	
AB-03	Page anchors in mega-menu work	All Devices	1. Click "Who we are", "Our story", "How we evolved", "Community today" from the mega-menu.	Page scrolls to correct section. Sticky navbar does not overlap section headings (scroll offset correct).	

Accessibility

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
ACC-01	Skip link functional	Laptop / Desktop	1. Press Tab on any page. 2. Press Enter on "Skip to main content".	Focus jumps to #main-content, bypassing nav.	
ACC-02	All images have alt text	Laptop / Desktop	1. Inspect all elements using DevTools or accessibility scanner.	Every image has a meaningful alt attribute. Decorative images have alt="" and aria-hidden="true".	
ACC-03	Form labels associated correctly	Laptop / Desktop	1. Inspect contact form inputs. 2. Check for attributes match input ids.	Each label is properly associated with its input. Screen reader announces label when field is focused.	
ACC-04	Colour contrast – body text	Laptop / Desktop	1. Use a contrast checker (e.g., axe DevTools) on body text and headings.	Text meets WCAG AA contrast ratio (≥4.5:1 for body, ≥3:1 for large text).	
ACC-05	Colour contrast – teal brand buttons	Laptop / Desktop	1. Check contrast of white text on teal (#0a8a8e) .btn-kicc buttons.	Contrast ratio ≥ 4.5:1. Note: teal buttons may be borderline — verify and flag if failing.	
ACC-06	Cookie dialog accessible	Laptop / Desktop	1. Open cookie banner. 2. Navigate by keyboard only (Tab, Enter, Space).	Dialog is a modal (role="dialog", aria-modal="true"). Focus is trapped inside. All buttons reachable by keyboard.	
ACC-07	Aria labels on icon-only links	Laptop / Desktop	1. Inspect footer social icons and navbar icon buttons.	Icon-only links have aria-label attributes (e.g., aria-label="GitHub repository").	
ACC-08	Page language declared	Laptop / Desktop	1. Inspect <html> tag on each page.	lang="en-GB" declared. Arabic text sections have lang="ar" and dir="rtl".	

Performance & Loading

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
PF-01	Page load on mobile network	Mobile – Portrait	1. Enable Chrome DevTools "Fast 3G" throttling. 2. Load homepage. 3. Time to interactive.	Page is usable within 5 seconds on Fast 3G. No layout shift visible after initial render.	
PF-02	Images lazy-load below fold	Laptop / Desktop	1. Open Network tab in DevTools. 2. Load homepage. 3. Check which images load initially vs on scroll.	Images below the fold load only when scrolled into view (lazy loading). Reduces initial page weight.	
PF-03	External CDN dependencies load	Laptop / Desktop	1. Load any page in DevTools Network tab. 2. Check Bootstrap, jQuery, Font Awesome CDN calls.	All CDN resources (Bootstrap 4.3.1, jQuery 3.3.1, Font Awesome 6.2.0) return 200 status. SRI hash integrity checked.	
PF-04	No JavaScript console errors	Laptop / Desktop	1. Open DevTools Console. 2. Load each page after accepting cookies.	Zero console errors. Warnings acceptable if non-critical. Prayer time data fetches successfully.	

Responsiveness & Layout

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
R-01	No horizontal scroll on any page	Mobile – Portrait	1. Load each page on 375px viewport. 2. Check for horizontal scrollbar.	No horizontal scroll on any page at 375px width.	
R-02	Text readable without zooming	Mobile – Portrait	1. Load homepage without any zoom.	Body text is minimum 16px equivalent. Headings and labels are clear. No need to pinch-zoom to read.	
R-03	Touch targets minimum 44x44px	Mobile – Portrait	1. Inspect all buttons and links on contact page and navbar.	All interactive elements are at least 44px tall/wide. Crowded elements have sufficient spacing.	
R-04	Landscape layout on mobile	Mobile – Landscape	1. Rotate device to landscape. 2. Check navbar, hero, and content sections on each page.	Navbar may expand to full-width. Hero does not overflow viewport height. No elements overlap or clip.	
R-05	Footer columns reflow on mobile	Mobile – Portrait	1. Scroll to footer on mobile.	Footer columns stack vertically. All footer links and address visible without overflow. Donate button full-width.	
R-06	Mega-menu columns on tablet	Mobile – Landscape	1. Open Programmes mega-menu on tablet or landscape mobile.	Three-column layout either renders side-by-side or gracefully collapses into single column. No content clipped.	
R-07	Teal theme-color applied on mobile	Mobile – Portrait	1. Add site to home screen or observe browser chrome on iOS/Android.	Browser status bar matches theme-color #0a8a8e. PWA-style appearance on supported browsers.	

Error States & Edge Cases

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
E-01	404 page for invalid URL	Laptop / Desktop	1. Navigate to <code>https://traleemasjidkicc.ie/nonexistent-page</code> .	GitHub Pages custom 404 page shown (if configured) or default GitHub 404. Should not show a blank page.	
E-02	Prayer times API failure fallback	Mobile – Portrait	1. Block the prayer times API endpoint in DevTools. 2. Load <code>prayer-times.html</code> .	Graceful fallback: either cached data or a user-friendly error message. App does not crash. "—" values noted and should not persist long-term.	
E-03	Contact form network failure	Laptop / Desktop	1. Go offline (DevTools > Network > Offline). 2. Submit contact form with valid data.	User sees a clear error message (not a browser network error page). Form data not silently lost.	
E-04	Maps consent placeholder shown correctly	Mobile – Portrait	1. Decline Third-party embeds. 2. Open contact page.	Map area shows a styled placeholder with link to open Privacy & cookies panel — not a blank space or broken element.	

SEO & Meta Tags

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
SEO-01	Canonical URL correct on each page	Laptop / Desktop	1. Inspect <code><link rel="canonical"></code> on each HTML page.	Each page has a canonical pointing to <code>https://traleemasjidkicc.ie/[page].html</code> . No <code>/index.html</code> vs <code>/</code> inconsistency.	

#	Test Case Heading	Device / Orientation	How to Test	Expected Result	Status
SEO-02	OG and Twitter card meta tags present	Laptop / Desktop	1. Inspect <head> of each page.	og:title,og:description,og:image, twitter:card present and meaningful on every page. OG image path resolves.	
SEO-03	Structured data valid	Laptop / Desktop	1. Paste page source into Google Rich Results Test.	No structured data errors for Mosque/Organization, WebPage, BreadcrumbList schema.	
SEO-04	Sitemap accessible	Laptop / Desktop	1. Navigate to /sitemap.xml.	Sitemap loads and lists all major pages with correct URLs. All listed URLs use the canonical domain.	
SEO-05	Robots.txt correct	Laptop / Desktop	1. Navigate to /robots.txt.	robots.txt allows indexing of public pages. No accidental Disallow: /.	

Summary

Total Test Cases: 72

Priority Breakdown

Medium	30	N-03–N-06, N-08–N-12, CC-03, CC-05–CC-08, H-01, H-02, H-04–H-07, PT-02, PT-04–PT-06, CF-04–CF-06, CF-10, CF-11, CF-14–CF-16, A-01–A-03, A-06
Low	14	M-01–M-03, P-01–P-04, AB-01–AB-03, ACC-05, ACC-07, ACC-08, SEO-01–SEO-05, PF-01–PF-04, R-04–R-07, E-02, E-04

Critical Issues Found During Audit

- 1. Cookie consent gate blocks entire site** — The site adds `inert` to all body children until consent is given. While intentional from a compliance standpoint, if the cookie banner JS fails to load (e.g., CDN timeout), the site will be completely inaccessible. A fallback or timeout release is recommended.
- 2. Bootstrap 4.3.1 is outdated** — Bootstrap 4.3.1 (released 2019) has known accessibility and component bugs. Upgrade path to Bootstrap 5.x should be planned. jQuery dependency also bundled.
- 3. CDN-hosted assets (Bootstrap, jQuery, Font Awesome)** — All critical CSS/JS is loaded from external CDNs (stackpath, cdnjs, code.jquery.com). Any CDN outage will break layout and functionality. Consider self-hosting critical assets or using a fallback strategy.
- 4. Prayer times show "—" on initial load** — The navbar prayer times widget initialises with — placeholders. If the prayer times data source is slow or fails, users may see dashes permanently. Caching strategy and loading state feedback should be verified.
- 5. Contact form uses Formspree free tier** — Formspree free tier has submission limits. If the monthly limit is exceeded, form submissions will silently fail or show a generic error. Consider upgrading or adding a user-visible quota warning.

6. **Arabic RTL text** — Arabic greeting on `contact.html` uses `lang="ar" dir="rtl"`. Verify across iOS Safari and older Android browsers that RTL text renders correctly and does not bleed into surrounding LTR layout.
7. **No custom 404 page detected in repo root** — A `404.html` file was not observed in the repository root. GitHub Pages will serve its default 404 page, which does not match the site's branding. A branded `404.html` is strongly recommended.
